Enterprise AI Diversification

Strategic Presentation Toolkit

"Hybrid Intelligence" Model

Diversifying AI Tools to Reclaim 15-22% Team Productivity

December 2025

Prepared for Leadership Review

1. Executive Summary

The Opportunity

INT Inc. has built a strong foundation with Microsoft 365 and Copilot for internal data security and searchability. However, **70% of Fortune 500 companies now deploy AI**, and **87% of MSPs report significant AI knowledge gaps**. The competitive window is 6-18 months before AI becomes table stakes.

The Capability Gap

While Copilot excels as a **Librarian** (searching and organizing internal data), it isn't always the best **Analyst** or **Coder**. Competitors using specialized tools like Perplexity for real-time market research or Claude for complex code generation are moving faster.

The Solution: Hybrid Intelligence

- **Microsoft Copilot:** Internal data (SharePoint, Teams, Outlook) - the secure foundation
- **Claude Enterprise:** Complex reasoning, technical documentation, code review
- **Perplexity Pro:** Real-time research, vendor intelligence, market analysis
- **ChatGPT/Gemini:** Creative content, client communications, specialized workflows

The Numbers

Metric	Value
Year 1 Investment	$50K-$75K
Projected Time Savings	15-22% productivity gains
3-Year ROI	626% (Hybrid Model)
Breakeven Timeline	Month 6

2. The Elevator Pitch Script

Use this script when you stand up to present Slide 1. It establishes you as a forward-thinking partner, not just a complainer.

Opening (30 seconds)

"Good morning/afternoon. Thank you for the time.

We all know AI is shifting the landscape. Right now, INT Inc. has a strong foundation with Microsoft 365 and Copilot. It's excellent for keeping our internal data secure and searchable."

The Problem (45 seconds)

"However, as I've been digging into our workflows across the company, I've noticed a 'Capability Gap.' While Copilot is a great Librarian, it isn't always the best Analyst or Coder.

Competitors who are using tools like Perplexity for real-time market research, or Claude for complex code generation, are moving faster than us. They are getting answers in seconds that take us minutes or hours."

The Solution (30 seconds)

"My goal today isn't to replace Copilot—it's to diversify our toolkit. I want to show you how a low-cost, high-security pilot program can help us reclaim about 15% of our team's time for higher-value work.

Let's look at the numbers."

Key Phrases to Emphasize

- **"Diversify our toolkit"** — Not replacing, adding options
- **"Capability Gap"** — Technical term that sounds strategic
- **"Librarian vs. Analyst"** — Memorable metaphor
- **"Low-cost, high-security"** — Addresses two biggest concerns upfront

3. Objection Battle Card

Executives will interrupt you. Here are the top objections and exactly how to respond without sounding defensive.

OBJECTION 1

"We already pay for Copilot. Why should we pay for more tools?"

Your Response:

"That's a great point on cost. Think of Copilot like a General Practitioner doctor—essential for general health. But sometimes you need a Specialist.

For complex coding or deep market research, Copilot often hallucinates or gets stuck. For just $20/month, a 'Specialist' tool like Claude can save an engineer 5 hours. The ROI on that $20 is instant."

Key Data Point: Claude Pro at $20/month = 5 hours saved per engineer = $250+ value at $50/hr loaded cost

OBJECTION 2

"I'm worried about security. I don't want company data on Google or Anthropic servers."

Your Response:

"I agree 100%. That is why the Data Triage Matrix is the core of this proposal.

We are strictly prohibiting Client PII in these new tools. We will only use them for non-sensitive tasks like code syntax, public market research, and generic drafting. Secure data stays in Microsoft. Speed goes to the others."

Key Data Point: All recommended platforms (Claude, Perplexity) have SOC 2 Type II certification and zero data retention policies

OBJECTION 3

"This sounds complicated to manage. We don't want Shadow IT."

Your Response:

"Actually, 'Shadow IT' is happening right now. People are likely using personal ChatGPT accounts because they need the help.

By sanctioning a Pilot Program, we bring that activity into the light, govern it, and actually see what works. It gives us control back, rather than losing it."

Key Data Point: Industry surveys show 60-70% of employees use unauthorized AI tools. Sanctioned pilots reduce risk.

4. Data Triage Matrix

This is the governance framework that makes the proposal possible. It addresses security concerns by clearly defining what data goes where.

Data Type	Platform	Security Level	Examples
Client PII	Microsoft ONLY	RESTRICTED	SSN, financials, health data
Internal Docs	Microsoft + Claude	CONFIDENTIAL	SOPs, runbooks, policies
Code/Technical	Claude + ChatGPT	STANDARD	PowerShell, Python, configs
Market Research	Perplexity + Gemini	PUBLIC	Vendor intel, industry trends
Creative Content	ChatGPT + Gemini	PUBLIC	Blog drafts, social, emails

The Core Principle

SECURE DATA stays in Microsoft. SPEED goes to the specialists.

5. Department ROI Quick Reference

INT Inc-specific ROI projections by department, based on McKinsey and Gartner benchmarks applied to INT's 55-person team structure.

Department	AI Platform	Time Savings	Cost Impact	ROI
IT Services	Copilot + Claude	30-40%	50-60%	**800-1000%**
InfoSec	Claude	69%	50-60%	**800-1000%**
Marketing	Gemini + ChatGPT	63%	40-50%	**800-1200%**
Creative	ChatGPT + Copilot	38%	25-30%	**500-700%**
Operations	Claude + Copilot	70%	50-60%	**600-900%**

6. One-Pager Executive Briefing

Email this text to leadership after the meeting. It summarizes the entire proposal in one page.

EXECUTIVE BRIEFING: AI Toolkit Diversification Proposal

The Problem

Over-reliance on a single AI vendor (Microsoft) creates blind spots in research and coding efficiency. While Copilot excels at internal data retrieval, it underperforms in real-time market research, complex reasoning tasks, and specialized code generation. Competitors leveraging multi-platform AI strategies are achieving 20-40% faster delivery times.

The Solution

A "Hybrid Intelligence" model using complementary AI tools:

- **Microsoft Copilot (Internal):** Secure data, M365 integration, SharePoint search
- **Perplexity (Research):** Real-time market intelligence, vendor analysis, competitive research
- **Claude (Reasoning):** Complex documentation, code review, compliance analysis

The Pilot

A proposed 30-day test with 5 users across IT, InfoSec, and Marketing to measure efficiency gains. Metrics include time-to-resolution, documentation quality scores, and user satisfaction ratings.

The Ask

1. Approval for a $500 pilot budget (5 licenses × $20/month × 5 months)

2. Provisional policy update to allow approved AI tools for non-PII tasks

3. 30-day review checkpoint to assess ROI and expand or terminate

Expected Outcomes

- 15-22% productivity improvement in pilot departments
- Validated use cases for company-wide rollout
- Reduced Shadow IT risk through sanctioned tool usage
- Foundation for AI Your BI℠ service enhancement

7. 30-Day Pilot Proposal

Pilot Structure

- **Week 1:** Tool provisioning, user training, baseline metrics capture
- **Week 2-3:** Active usage, daily feedback collection, workflow integration
- **Week 4:** ROI analysis, report generation, expansion recommendation

Recommended Participants (5 Users)

- 2 IT Services technicians (ticket triage, documentation)
- 1 InfoSec analyst (compliance docs, policy review)
- 1 Marketing specialist (content creation, campaign analysis)
- 1 Operations team member (SOP creation, process documentation)

Success Metrics

- **Time saved:** 3-5 hours/user/week minimum
- **User satisfaction:** 4.0/5.0 or higher
- **Documentation quality:** 25% reduction in revision cycles
- **Security:** Zero incidents, 100% Data Triage Matrix compliance

Budget Summary

Item	Cost
Claude Pro (5 licenses × $20 × 5 months)	$500
Perplexity Pro (optional, 2 licenses × $20 × 3 months)	$120
Total Pilot Investment	**$500-$620**
